How to use this

Pages 3 to 11 are the rules. Everything CoinLens ships should pass them. Pages 12 to 17 are options: pick a direction per channel, never per screen.

What’s fixed

The name, the tagline, the mark’s construction, and the one colour rule: green is for looking, brass is for money.

What’s flexible

Background (dark, light, paper), type pairing, texture, energy level. The directions show how far it stretches without breaking.

A loupe for your pocket change

CoinLens turns two phone photos into a graded, priced, ready-to-post eBay listing. It is for people selling coins, not people studying them: estate clear-outs, flea-market pickers, hobbyists with a shoebox from Grandpa.

The brand borrows from two objects that belong on a coin dealer's bench: **the coin itself** (antique brass, reeded edges, engraved numerals) and **the jeweller's loupe** (a dark lens, a reticle, the act of looking closely). Everything in the identity is one of those two things.

THE ONE-LINE BRIEF

A premium tool that respects the seller's time, tells the truth about the coin, and makes the money legible.

PERSONALITY

Exacting

Numbers are tabular, labels are engraved, nothing wobbles. The app looks like it measures things.

PERSONALITY

Warm

Near-black is warm, not blue. Paper is cream, not white. It feels like a shop, not a lab.

PERSONALITY

Plainspoken

We say "sold for", not "market valuation". Short sentences. No numismatic gatekeeping.

POSITIONING

WE ARE	The fastest honest route from a coin in your hand to a listing that sells.
WE ARE NOT	A collector's database, a price-guide subscription, or a grading service.
PROOF	Real sold comps, melt value, confidence shown, a listing you can post in one tap.
TAGLINE	**Know what you're holding.** Always sentence case, always with the period.

A reeded coin with a lens where the portrait should be

Six parts, each with a job. Reproduce them in this order and at these proportions on a 64-unit grid. Nothing may be added inside the coin.

#	PART	SPEC (64-UNIT GRID)	MEANING
1	**Coin body**	Circle r=30, brass gradient #f3e1b0 → #d4a84b → #8f6619 at 135°, soft white highlight top-left	The thing being sold
2	**Reeded edge**	Circle r=28, dashed stroke 2.6, dash 1.3 / gap 2.1, #3a2805 at 55%	Real coins have a milled rim
3	**Field**	Circle r=23, #0c0a08 (ink-900)	Obsidian; the dark stage
4	**Lens**	Circle r=15.5, radial #2fb59a → #145a4e → #0b2b26 off-centre, 1.8 stroke #4fd1b5, glint arc top-left	The loupe; looking closely
5	**Reticle ticks**	Four 4.5-unit strokes at N/E/S/W on the field, 1.6 wide, #f3ede1 at 90%	Measurement, precision
6	**Centre dot**	Circle r=2.2, #bff0e4	Focus found

Full colour (default)

One-colour cream

One-colour brass (foil, emboss)

Keep it round, keep it brass, keep the lens green

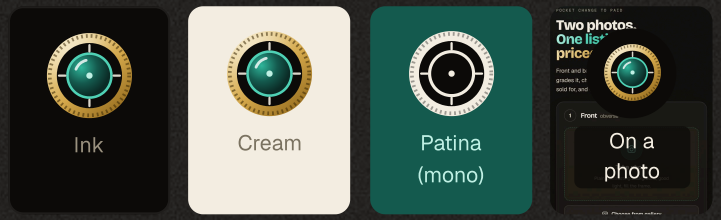

CLEAR SPACE & MINIMUM SIZE

Clear space on all sides equals one quarter of the coin's diameter. Nothing enters it: no type, no edges, no other marks.

Minimum: **24 px** on screen, **8 mm** in print. Below 32 px drop the glint arc and reeding; below 20 px use the one-colour version.

ON BACKGROUNDS

DON'T

NO RECOLOURING

Never blue, never silver. CoinLens is never cold.

NO GOLD LENS

Brass is the coin, green is the looking. Don't mix them.

NO STRETCHING OR TILTING

Always a true circle, always upright. Spin it in motion, not in a still.

NO TYPE INSIDE

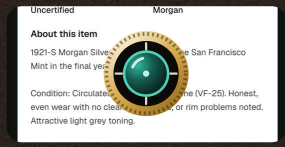

The lens is the symbol. Initials, dollar signs and dates stay out.

NO OUTLINES OR EFFECTS

No hollow versions, bevels, drop shadows on the mark itself, or 3D renders in UI.

NO BUSY BACKGROUNDS

On photos, sit it on an ink disc (see left) or don't use it.

DO

Use the mark at app-icon scale with the ink field bleeding to the icon edge (as in the current iOS icon). Pair it with the wordmark on the left of a header. Let it cast a soft verdigris glow on dark surfaces: `drop-shadow(0 8px 20px rgba(79,209,181,.35))`.

One word, two colours

PRIMARY LOCK-UP

CoinLens

Know what you're holding.

STACKED

CoinLens

ON CREAM

CoinLens

"Lens" drops to patina-600 for contrast

Rules

SPELLING	**CoinLens**. One word, capital C and L. Never "Coin Lens", "Coinlens" or "COINLENS".
TYPE	Bricolage Grotesque ExtraBold (800), tracking −0.045em, line-height 1. Optical size follows point size.
COLOUR	"Coin" in cream-100, "Lens" in the patina gradient (#bff0e4 → #4fd1b5 → #2fb59a). On light surfaces "Lens" is solid patina-600. Never brass: the word is about looking.
MARK SIZE	Mark height = 1.6 × cap height of the wordmark. Gap between mark and word = ⅓ mark width.
TAGLINE	Geist Regular, sentence case, cream-500, roughly ¼ the wordmark size. Sits under the word, left-aligned with "C". Drop it below 28 pt.
IN RUNNING TEXT	Set "CoinLens" in the body face, no special colour. The wordmark is for headers, covers and marketing.
SUB-BRANDS	Append in Geist Medium after a thin space: **CoinLens** Batch. Never create a second mark.

Obsidian, cream, verdigris, brass

Ink

Warm near-black surfaces. Never a blue-black.

- ink-950 `#070605`
- ink-900 · canvas `#0c0a08`
- ink-800 · cards `#15120e`
- ink-700 `#201b15`
- ink-600 · borders `#2e2820`

Cream

Paper-coloured type. Never pure white.

- cream-100 · text `#f3ede1`
- cream-300 · secondary `#d3cab8`
- cream-500 · labels `#9a917f`

Patina

Verdigris green. Everything about looking and doing.

- patina-200 `#bff0e4`
- patina-300 · links `#8fe3cf`
- patina-400 · primary `#4fd1b5`
- patina-500 `#2fb59a`
- patina-600 · on light `#1f8a76`
- patina-700 `#145a4e`

Brass

Antique gold. Money, value and warnings only.

- gold-200 `#f3e1b0`
- gold-300 `#e8c874`
- gold-400 · prices `#d4a84b`
- gold-500 `#b9892e`
- gold-600 · on light `#8f6619`
- gold-700 `#5e400a`

Proportions. On any screen: roughly 80% ink, 15% cream, 4% patina, 1% brass. Brass is rare so a price always jumps out.

Gradients. Only two: the patina gradient (200 → 400 → 500 at 120°) and the brass gradient (200 → 400 → 500). Used for the wordmark, primary buttons and prices. Nowhere else.

Glows. Dark pages carry a verdigris radial glow top-left at 16% and a brass glow bottom-right at 10%. Film grain at 7% on top. That is the whole “atmosphere”.

Green is for looking. Brass is for money.

This is the single most important rule in the identity. It means a user can tell, without reading, whether a thing on screen is an action or a dollar amount.

PATINA · LOOKING & DOING

- Primary buttons (Identify coin, Save, Continue)
- Focus rings, active chips, toggles, checkboxes
- Links, progress, the reticle, crop handles
- Headline emphasis and the “Lens” in the wordmark
- Success states and the install prompt

Identify coin · HIGH CONFIDENCE · Verify certificate ↗

BRASS · MONEY & CAUTION

- Prices, melt value, totals, profit
- “List at”, “Suggested”, “Asking” cards (gold border at 30%, fill at 10%)
- The one brass button: *List on eBay*
- Warnings: medium confidence, blurry photo, below melt
- Charts of value over time

List on eBay · $184 · MEDIUM CONFIDENCE

DO

Put a brass price inside a patina-bordered card. The roles stay readable.

DON’T

Make a brass “Continue” button, or a green price. The user loses the cue.

DON’T

Introduce red for errors. Errors are cream text on an ink-800 card with a thin brass border, and a plain sentence.

CONTRAST (WCAG, ON INK-900 #0C0A08)

PAIR	RATIO	USE	PAIR	RATIO	USE
cream-100 on ink-900	17.5 : 1	Body text	patina-400 on ink-900	10.4 : 1	Links, labels
cream-500 on ink-900	6.5 : 1	Eyebrows (small, so keep ≥ 10.5 px)	gold-400 on ink-900	8.9 : 1	Prices
#04211b on patina-400	9.7 : 1	Primary button text	patina-600 on cream-100	4.6 : 1	“Lens” on light surfaces (AA)

A display face, a workhorse, and a ledger

DISPLAY · BRICOLAGE GROTESQUE

Two photos. One listing, priced to sell.

Headlines, the wordmark, big numbers. ExtraBold 800 at −0.035 to −0.045em. Variable optical size and width axes: let it tighten at large sizes. **Bricolage has no italic. Never fake one.**

Google Fonts, OFL. Fallback: Geist.

BODY · GEIST

Front and back of any coin. CoinLens finds it, grades it, checks what the same coin actually sold for, and writes the eBay listing for you.

Everything readable: paragraphs, buttons, form fields, table cells. Regular 400 for text, Medium 500 for buttons and names, SemiBold 600 for small headings. Line-height 1.45 to 1.5.

Google Fonts / Vercel, OFL. Fallback: system-ui.

LEDGER · GEIST MONO

WHERE THE PRICE COMES FROM

1921 S · 26.73 g · 90% Ag
Melt $24.10 · Sold $168–$212

Eyebrow labels (10.5 px, 500, tracking 0.2em, uppercase, cream-500), weights, dates, SKUs, cert numbers, and any column of figures. Always tabular numerals.

Google Fonts / Vercel, OFL. Fallback: ui-monospace.

ROLE	FACE / WEIGHT	SIZE (MOBILE)	TRACKING
Hero headline	Bricolage 800	34–40 px	−0.045em
Section title	Bricolage 800	22–26 px	−0.035em
Card heading	Geist 600	15–16 px	−0.01em
Body	Geist 400	15 px / 1.5	0
Eyebrow	Geist Mono 500, caps	10.5 px	0.2em
Big price	Bricolage 800, brass, tabular	28–34 px	−0.03em

DO

Mix one display line with mono labels on the same card. The contrast between loud and engraved is the look.

DON'T

Set paragraphs in Bricolage, use italics anywhere, letter-space body text, or use more than these three faces (Fraunces appears only in Direction D).

Like a good dealer at the counter

Knows the coin, tells you straight, doesn't waste your afternoon. Confident about facts, honest about uncertainty, never condescending about what you don't know.

Plain

Short sentences. Everyday words. "Sold for", not "realised". "Worn", before "VG-8".

Specific

Numbers over adjectives. "Three sold this month for $160–$210" beats "strong demand".

Honest

Show confidence levels. Say when a close-up is needed. Never pretend a blurry photo is fine.

Warm, not cute

No exclamation marks, no emoji in product copy, no "oops". Warmth comes from being useful.

ALTERNATE LINES (FOR ADS, STORE BANNERS, SOCIAL)

- Know what you're holding. (primary, always)
- Pocket change to paid.
- Two photos. One listing, priced to sell.
- Grandpa's coffee can, finally sorted.
- Stop guessing. Start listing.

MOMENT	SAY	NOT
Hero	Two photos. One listing, priced to sell.	AI-powered numismatic valuation platform
Empty state	Snap the front and the back. Any angle, any light; we'll find the coin.	No images uploaded yet!
Working	Reading the coin… checking what it sold for…	Processing your request
Result	1921-S Morgan dollar, about Very Fine. Three sold this month for $160–$210.	Identification complete. Estimated value: $185.
Uncertain	We're fairly sure, not certain. A close-up of the mint mark would settle it.	Low confidence result
Limit hit	That's 25 scans today. Sign in for more, or come back tomorrow.	Error 429: quota exceeded
Price caveat	Silver melt is $24 today, so don't list below that.	Intrinsic metal value threshold
Hint field	e.g. from Grandpa's collection, weighs 26.7 g, came in a 2x2 marked "1921 S Morgan"	Enter additional metadata

MECHANICS

Sentence case everywhere, including buttons and titles. Oxford comma. Curly quotes and apostrophes. Dollar amounts as $184, ranges as $160–$210 with an en dash. Grades in plain words first, Sheldon scale in parentheses when useful. American English and American references: the audience sells on eBay US.

Grain, glow, and a slow-turning reticle

Texture

glow 16% + grain 7% + 1 px hairline border

Every dark surface has the two radial glows and a film-grain layer (SVG feTurbulence, 7% opacity). Cards use 1 px borders at 8% white and an inner highlight at 6%. No drop shadows on cards except the primary-button glow.

Motion

`reticle` · 14 s / 22 s linear
Dashed ring with four ticks rotates around the working photo; a second ring counter-rotates.

`coin-spin` · 1.6 s ease-in-out
The mark turns on its Y axis while waiting.

`fade-up` · 0.5 s, cubic-bezier(.2,.7,.2,1)
Results arrive from 10 px below.

`pulse-ring` · 2.4 s ease-out
A soft patina ring expands once on success.

Motion is slow and mechanical, like a loupe being adjusted. Nothing bounces. Respect `prefers-reduced-motion`.

Photography

Coins are the hero. Show them large, centred, on ink or on a real surface (felt, wood, a 2x2 flip). Raking light to catch the relief. No stock photos of hands holding phones, no piles of generic gold, no green-screen renders.

User photos in the app get the “coin-ring”: a 2 px patina bezel with a soft outer glow, so even a kitchen-table snapshot looks examined.

Five ways to take the brand

Same name, same mark, same colour rule. What changes is the surface, the type pairing and the energy. Pick one per channel and stick to it; the app itself stays in Direction A.

A
Obsidian & Verdigris

The core. The app, the website, the store. Dark, warm, precise.

B
Mint Sheet

The light twin. Print, PDFs, eBay store header, daylight marketing.

C
Proof Strike

Stripped to black, white and one brass hit. Merch, stickers, developer docs.

D
Coin Shop

Oxblood, brass, a serif. For collectors, shows, the newsletter.

E
Signal

Patina turned up. Short video, TikTok, app-store screenshots, launch posts.

CHANNEL	DIRECTION	CHANNEL	DIRECTION	CHANNEL	DIRECTION
App, website, email	**A**	Printed one-pager, invoices, this guide	**B**	Sticker, tee, GitHub README	**C**
eBay store banner	**B**	Coin-show flyer, collector newsletter	**D**	TikTok, Reels, Shorts, launch tweet	**E**
App-store listing	**A** (screens) + **E** (captions)	Partner deck	**A** or **B**	Pitch to a dealer	**D**

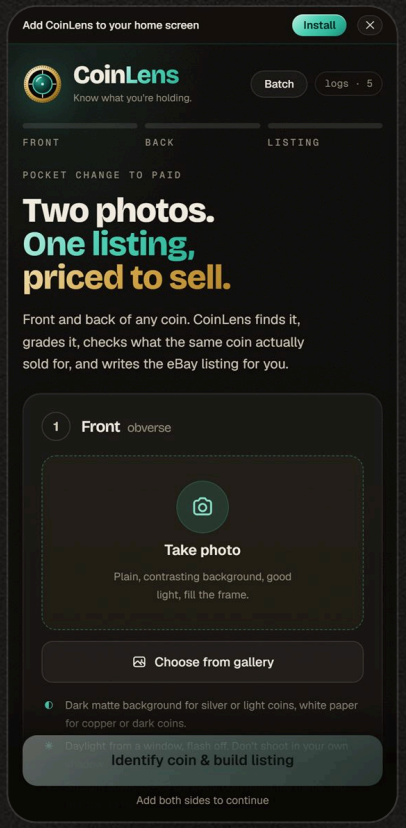

Obsidian & Verdigris

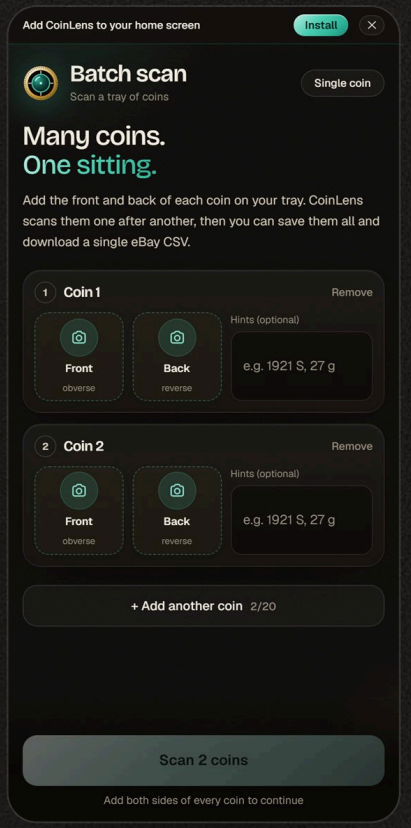

The identity as shipped. A dark, warm bench with a green lens and a brass coin. Everything in pages 3 to 11 describes this direction in full.

MOOD	A dealer's back room at night. Felt, brass, a desk lamp.
SURFACE	ink-900 with glows and grain; cards ink-800
TYPE	Bricolage 800 / Geist / Geist Mono
ACCENT	patina-400 for action, gold-400 for money
TEXTURE	Grain 7%, hairlines, reticle
USE FOR	The product. Website, app, emails, partner decks.

WHY IT WORKS

Dark backgrounds make coin photos look expensive and make a brass price pop. The green is unexpected in a money app, which is exactly why it's ownable.

Social card: mark left, wordmark right, tagline, mono eyebrow.

App icon: field bleeds to the edge.

Mint Sheet

The same brand in daylight. Cream paper, ink type, verdigris pulled down to patina-600 so it still reads on light. Brass darkens to gold-600 for the same reason. Think of a mint sheet or an auction catalogue page.

MOOD	A catalogue on a kitchen table. Clean, unhurried.
SURFACE	cream-100 #f3ede1; cards white at 55%; rules cream-300
TYPE	Unchanged: Bricolage 800 / Geist / Geist Mono
ACCENT	patina-600 #1f8a76 for action, gold-600 #8f6619 for money
TEXTURE	No glow. Very light paper grain allowed in print.
USE FOR	Printed material, PDFs, eBay store banner, invoices, daytime ads

DON'T

Use the light gradients from Direction A here. On cream, “Lens” and prices are solid colours. Never pure white (#fff) as a page background.

A printable listing sheet in Direction B. Same hierarchy as the app, inverted.

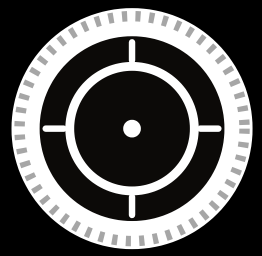

Proof Strike

Everything stripped back to a proof coin's contrast: true black, true white, and a single brass hit for the one thing that costs money. No green at all, which is why this direction is for objects, not interfaces.

MOOD	A proof strike under glass. Hard edges, one glint.
SURFACE	#000 or #fff, nothing between
TYPE	Geist Mono for everything; Bricolage only for the wordmark
ACCENT	gold-400 #d4a84b, once per surface
MARK	One-colour version, white or brass
USE FOR	Stickers, tees, 2x2 flip inserts, GitHub README, API docs, laser engraving

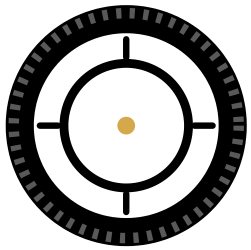

WHY IT EXISTS

Merch and docs get printed and photocopied. A mono version survives a one-colour press, a vinyl cutter and a dark-mode Markdown renderer.

CoinLens

KNOW WHAT YOU'RE HOLDING.

CoinLens

IDENTIFY · GRADE · PRICE · LIST

```
# CoinLens
Two photos in. A graded, priced, eBay-ready listing out.
$ git clone github.com/adrianchromenko/coin-scanner
$ npm run dev → http://localhost:3000
```

DIRECTION D · VINTAGE

Coin Shop

The brand in its Sunday clothes. Oxblood leather, brass hardware and a serif with some swash to it. Verdigris stays, but only as the lens and small accents, like the patina on an old shop sign.

MOOD	A downtown coin shop since 1962. Glass cases, velvet trays.
SURFACE	Oxblood #2a1014; deep #1a0a0c; rules #4a1d22
TYPE	Fraunces (600/700) for display, Geist for body, Geist Mono for ledgers
ACCENT	gold-300 #e8c874 leads; patina-500 for the lens and one detail
TEXTURE	Grain, engraved line rules, ornament dots “·”
USE FOR	Coin-show flyers, collector newsletter, dealer pitch, anniversary posts

CAREFUL

This is a costume, not a redesign. The mark does not change. Never bring Fraunces into the app.

A flyer header in Direction D. Fraunces may use italic; Bricolage never does.

DIRECTION E · LOUD

Signal

Patina turned all the way up for places where you have one second to win attention. Deep teal replaces obsidian, headlines get huge, numbers get enormous, and the brass becomes a pale highlight rather than a gradient.

MOOD	A lens catching the light. Fast, bright, confident.
SURFACE	Deep teal #04211b with a strong patina glow
TYPE	Bricolage 800 at display sizes, condensed via the width axis; Geist Mono captions
ACCENT	patina-200 #bff0e4 for text, gold-200 #f3e1b0 for the price
TEXTURE	Grain, scan-line reticle sweeps, the mark spinning
USE FOR	TikTok / Reels / Shorts, app-store caption frames, launch posts, OOH if ever

RULE

Still only one brass element per frame, and it is still the money. The colour rule survives even here.

Vertical video end-card and two caption frames. Huge type, one number, mark small in the corner.

Where it shows up

APP ICON

Ink field to the edge, mark centred at 76% of the tile. Already shipped as apple-icon and icon.svg.

SHARE CARD (1200×630)

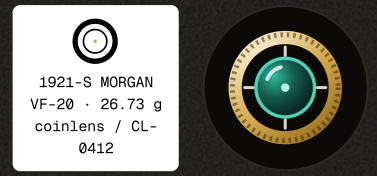

Mark left on a soft glow, wordmark and tagline right, mono eyebrow. Direction A only.

EBAY STORE BANNER

Direction B. Light so it sits well inside eBay's white chrome.

2×2 FLIP INSERT & STICKER

Direction C for the insert (one-colour press), a die-cut circle sticker of the full mark.

EMAIL SIGNATURE

Adrian · CoinLens
Know what you're holding. · coinlens-h71x.onrender.com

LISTING PHOTO FRAME

Enhanced photos ship on ink with the coin-ring. The buyer sees a coin that has been looked at.

LOADING & EMPTY STATES

The reticle turns, the mark spins. Copy says what is happening in plain words.

Paste this to generate logo explorations

```
Design a logo mark for “CoinLens”, a mobile app that identifies, grades
and prices coins from two phone photos and writes the eBay listing. The
audience is everyday coin sellers, not academics.

CONCEPT: a coin that is also a jeweller’s loupe. A round antique-brass
coin with a finely reeded (milled) edge. Where the portrait would be,
there is a dark circular field holding a deep verdigris-green lens with
a small bright glint in the upper left. On the dark field, four short
cream tick marks at north, east, south and west form a reticle, and a
tiny pale-mint dot sits at the exact centre. Brass means “the coin”;
green means “looking closely”. Never mix those two roles.

STYLE: flat vector, crisp geometry, perfect circle, upright, no
perspective, no 3D render, no bevels, no drop shadow, no text, no
letters, no dollar sign, no hands, no magnifying-glass handle. Premium,
warm, precise, like a well-made instrument. Think Braun meets a 1921
Morgan dollar.

COLOURS (exact): brass gradient #f3e1b0 → #d4a84b → #8f6619; dark field
#0c0a08 (warm near-black, never blue-black); lens radial #2fb59a →
#145a4e → #0b2b26 with a #4fd1b5 rim; ticks #f3ede1; centre dot #bff0e4.
Background: solid #0c0a08.

OUTPUT: one centred mark, large, on a plain #0c0a08 square, 1:1, with
generous empty margin around it. Transparent-background PNG if possible.
Also show it once at small size (about 48 px) so I can judge legibility.

Then give me 4 variations in a 2×2 grid: (1) exactly as described; (2)
reeding exaggerated, lens larger; (3) ticks extended into a full thin
dashed ring just inside the field; (4) a simplified single-colour
version in cream #f3ede1 on #0c0a08 for stickers and engraving.
```

How to run it

1. Open ChatGPT with image generation available and paste the whole prompt as one message.
2. Pick the strongest result and reply with one change at a time: “make the lens 15% larger”, “thin the ticks”, “more contrast between brass and field”.
3. When it is close, ask for **“the same mark, no changes, on a plain white background”** and **“…in a single colour, pure white on black”** to test it survives.
4. Ask for an SVG or a very high-resolution PNG (at least 2048 px). AI vectors are often messy, so redraw the winner in Figma or Illustrator using the 64-unit spec on page 4.

Reject it if

- The lens turned gold, or the coin turned green or silver.
- A magnifying-glass handle, a letter “C”, or a dollar sign crept in.
- The dark field disappeared (lens directly on brass reads as a button).
- It is tilted, has perspective, or is glossy 3D.
- It would not survive at 24 px.

TIP

Attach the icon from page 4 or 18 as a reference image and add: “Use the attached as the starting point. Keep its construction and colours exactly; explore only the reeding, tick length and lens size.” That gives you refinement, not reinvention.

Shorter prompts for specific jobs

WORDMARK LOCK-UP

```
Create a horizontal logo lock-up for “CoinLens”. Left: the mark described below. Right: the word “CoinLens” as one word in a bold, slightly condensed geometric grotesque with tight letter-spacing (like Bricolage Grotesque ExtraBold), “Coin” in warm cream #f3ede1 and “Lens” in verdigris #4fd1b5. Under the word, in small plain type, the tagline “Know what you’re holding.” in muted cream #9a917f. Background #0c0a08. Flat vector, no effects. Mark: an antique-brass coin (#d4a84b) with a reeded edge, a dark #0c0a08 field, a deep green #145a4e lens with a #4fd1b5 rim and glint, four cream reticle ticks and a pale-mint centre dot.
```

APP ICON

```
Design an iOS app icon for “CoinLens”. A rounded square filled edge to edge with warm near-black #0c0a08, with a soft verdigris glow top-left and a faint brass glow bottom-right. Centred at about 76% of the width: a brass coin with a reeded edge, dark field, deep green loupe lens with a #4fd1b5 rim and a glint, four short cream ticks, mint centre dot. Flat vector, no text, no bevel, no gloss. Export 1024×1024.
```

VINTAGE “COIN SHOP” BADGE (DIRECTION D)

```
Design a round badge logo for “CoinLens” in the style of a 1960s downtown coin shop sign. Oxblood background #2a1014. Outer ring of brass #c9a27a with small dot ornaments and the words “KNOW WHAT YOU’RE HOLDING” set in a spaced serif. Centre: the CoinLens mark (brass reeded coin, dark field, verdigris lens with glint, four ticks, centre dot). Below the ring, “CoinLens” in a high-contrast serif like Fraunces Bold, cream #f3e1b0, with “Lens” in green #2fb59a. Flat, printable, two or three spot colours. No gradients, no gloss.
```

MONO STICKER (DIRECTION C)

```
A single-colour die-cut sticker design: the CoinLens mark reduced to pure white line-and-fill on black. Solid white coin disc with a dashed reeded ring, black field, white lens outline, four white ticks, and one small brass #d4a84b centre dot as the only colour. Clean vector, bold enough to cut at 50 mm. No text.
```

WORDS THAT HELP

Use: reeded edge, milled rim, loupe, verdigris, antique brass, reticle, flat vector, warm near-black, instrument-like, precise.
Avoid: magnifying glass (brings a handle), gold coin (brings yellow and a dollar sign), futuristic, neon, glossy, 3D, mascot, crypto.

Everything on one page

Fixed

NAME	CoinLens (one word, C and L capitals)
TAGLINE	Know what you're holding.
EYEBROW	IDENTIFY · GRADE · PRICE · LIST
RULE	Patina = looking & doing. Brass = money & caution.
MARK	Brass reeded coin, ink field, verdigris lens, four ticks, centre dot. 64-unit grid, page 4.
NEVER	Blue, pure white, italics in Bricolage, red errors, type inside the mark
